You'll read many fascinating firsthand accounts of the women whose courage and undaunted spirit of adventure made the Antarctic much less remote to the world's social and scientific communities. The only book of its kind, Women in the Antarctic recounts the journeys of over 36 women--Navy personnel, research psychologists, scientists, members of the ASA (Antarctic Support Associates), and the American Women's Trans-Antarctic Expedition team members. You'll hear their voices and stories rise above the chilling howl of the Antarctic wind and come to understand the social and interpersonal impact such nontraditional female behavior had--and still has--on the world.
